OkCupid Dating App Dataset

2

Lovoo Dating App Dataset (German Dating App)

3

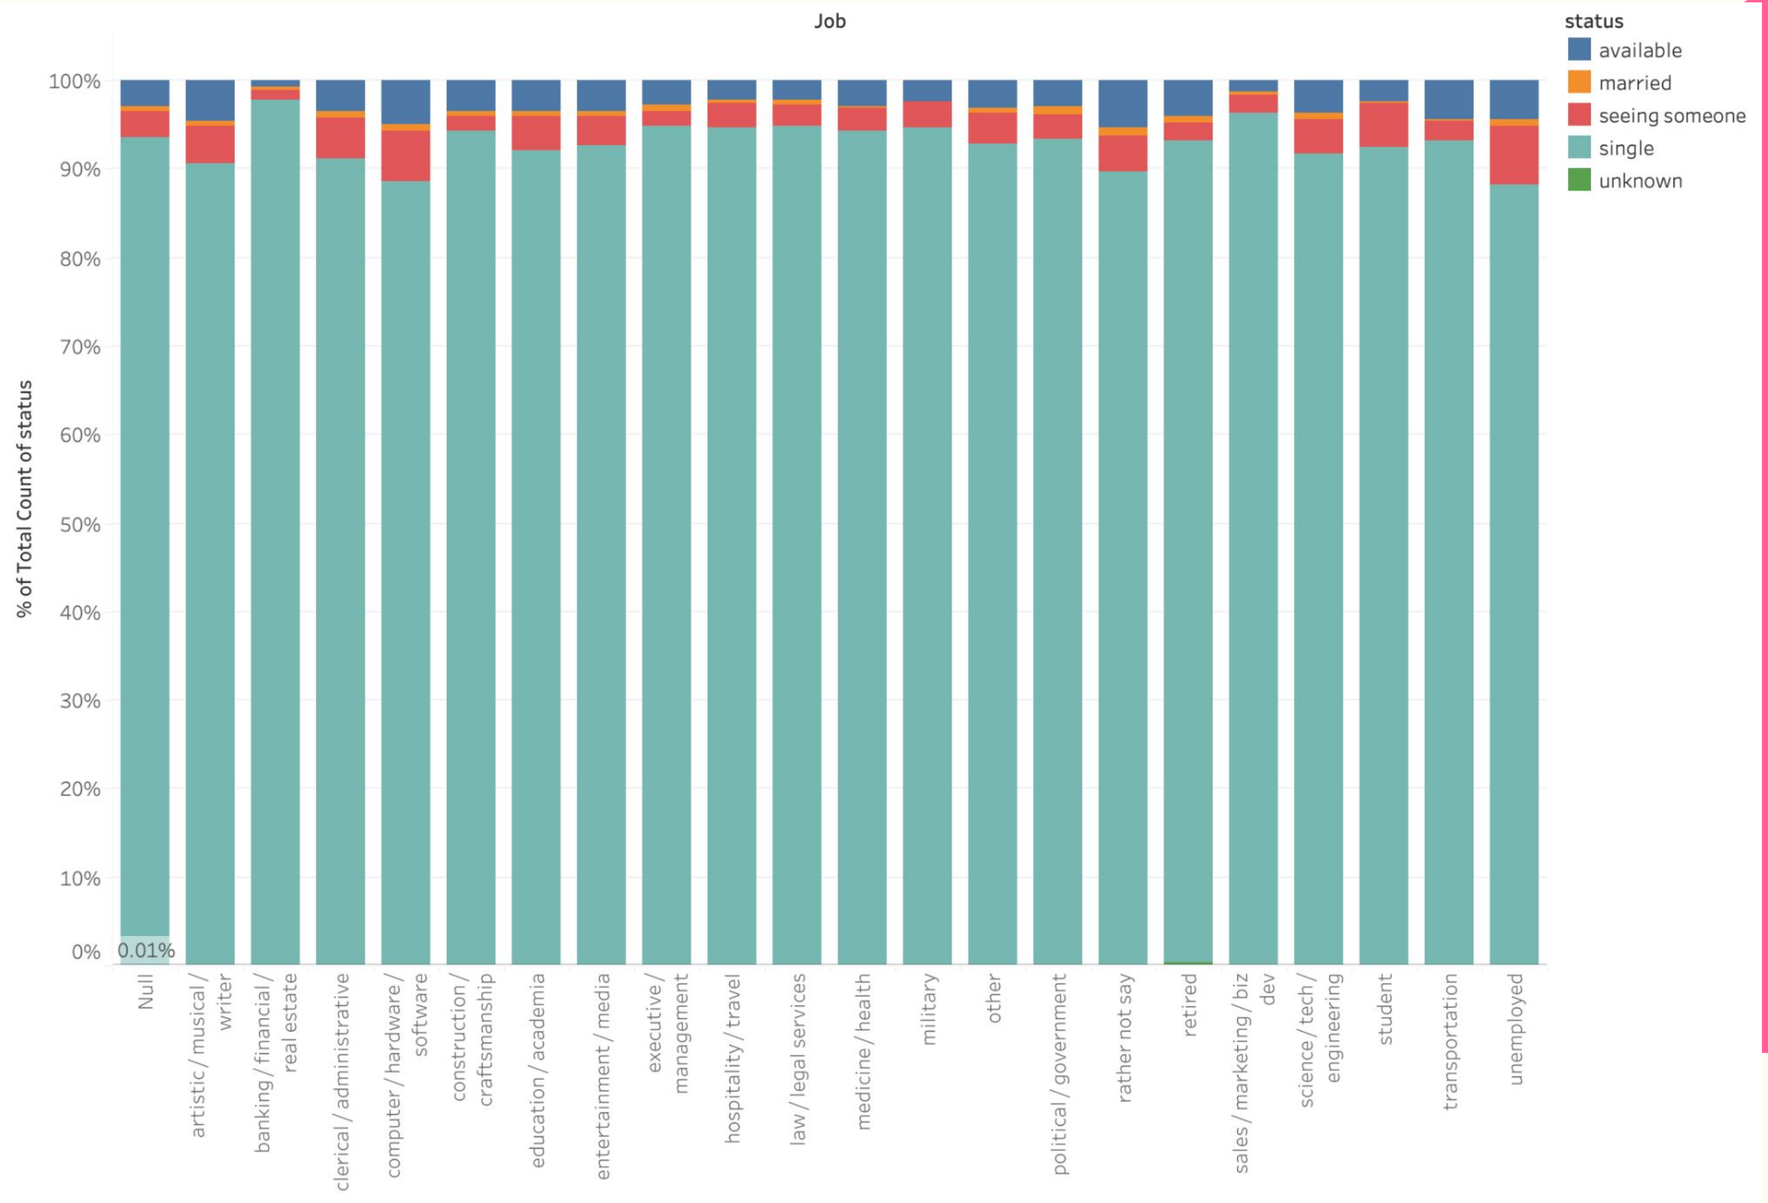
Dating App Dataset (Kaggle)

OkCupid Dataset

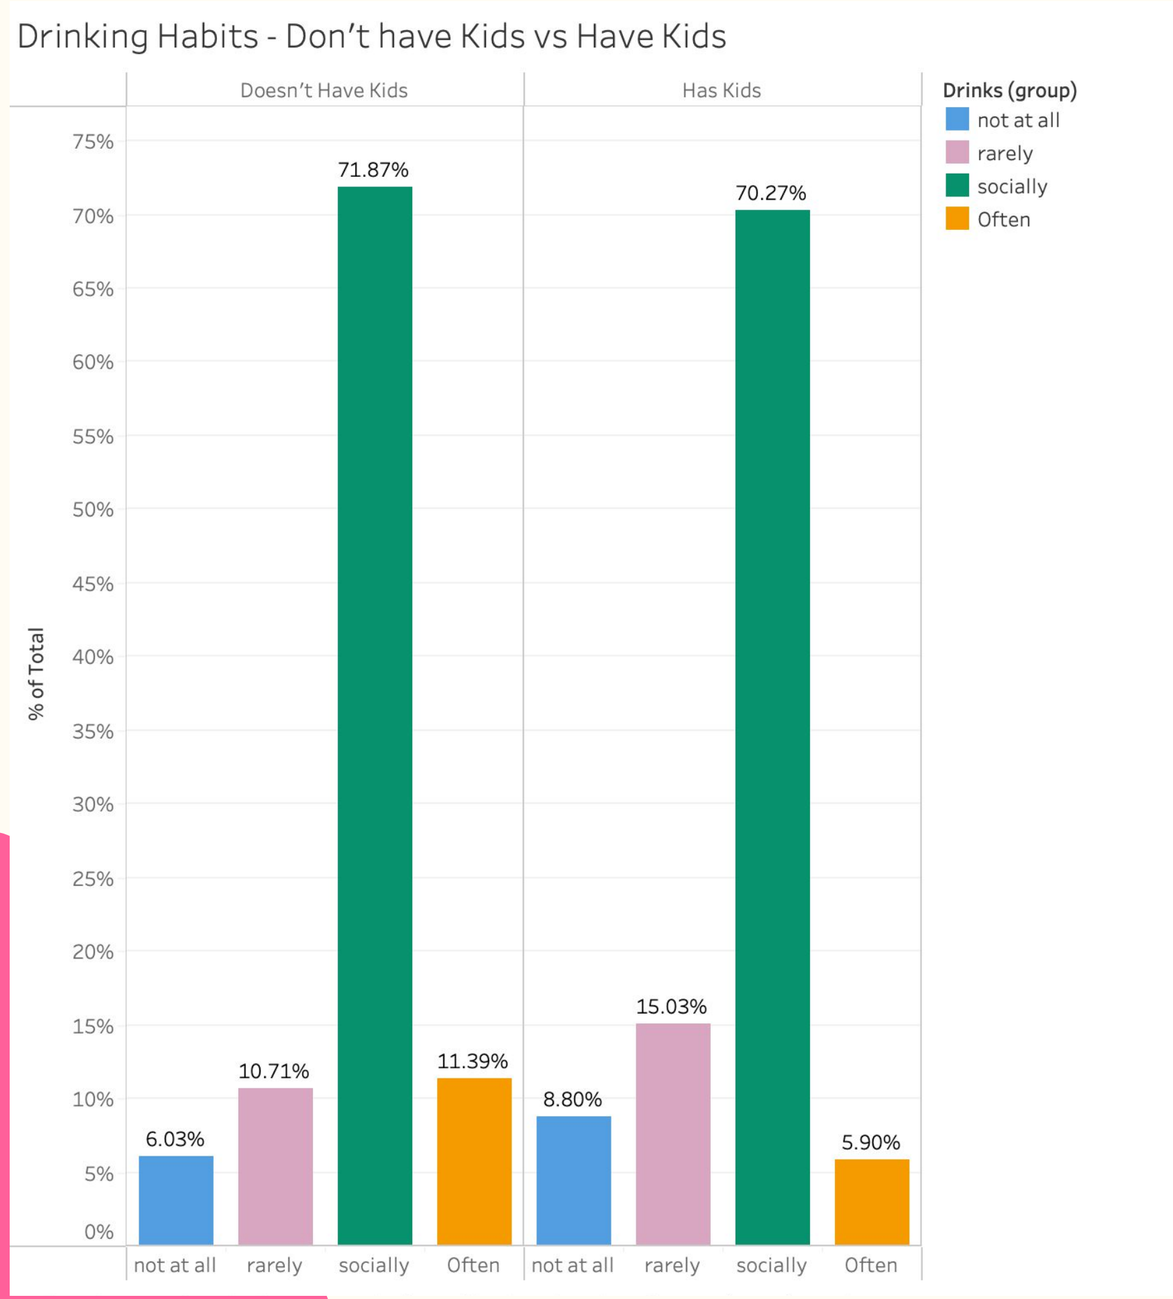
Some columns worked with:

- relationship status
- education group
- gender
- body type

Relationship Status Based on Occupation

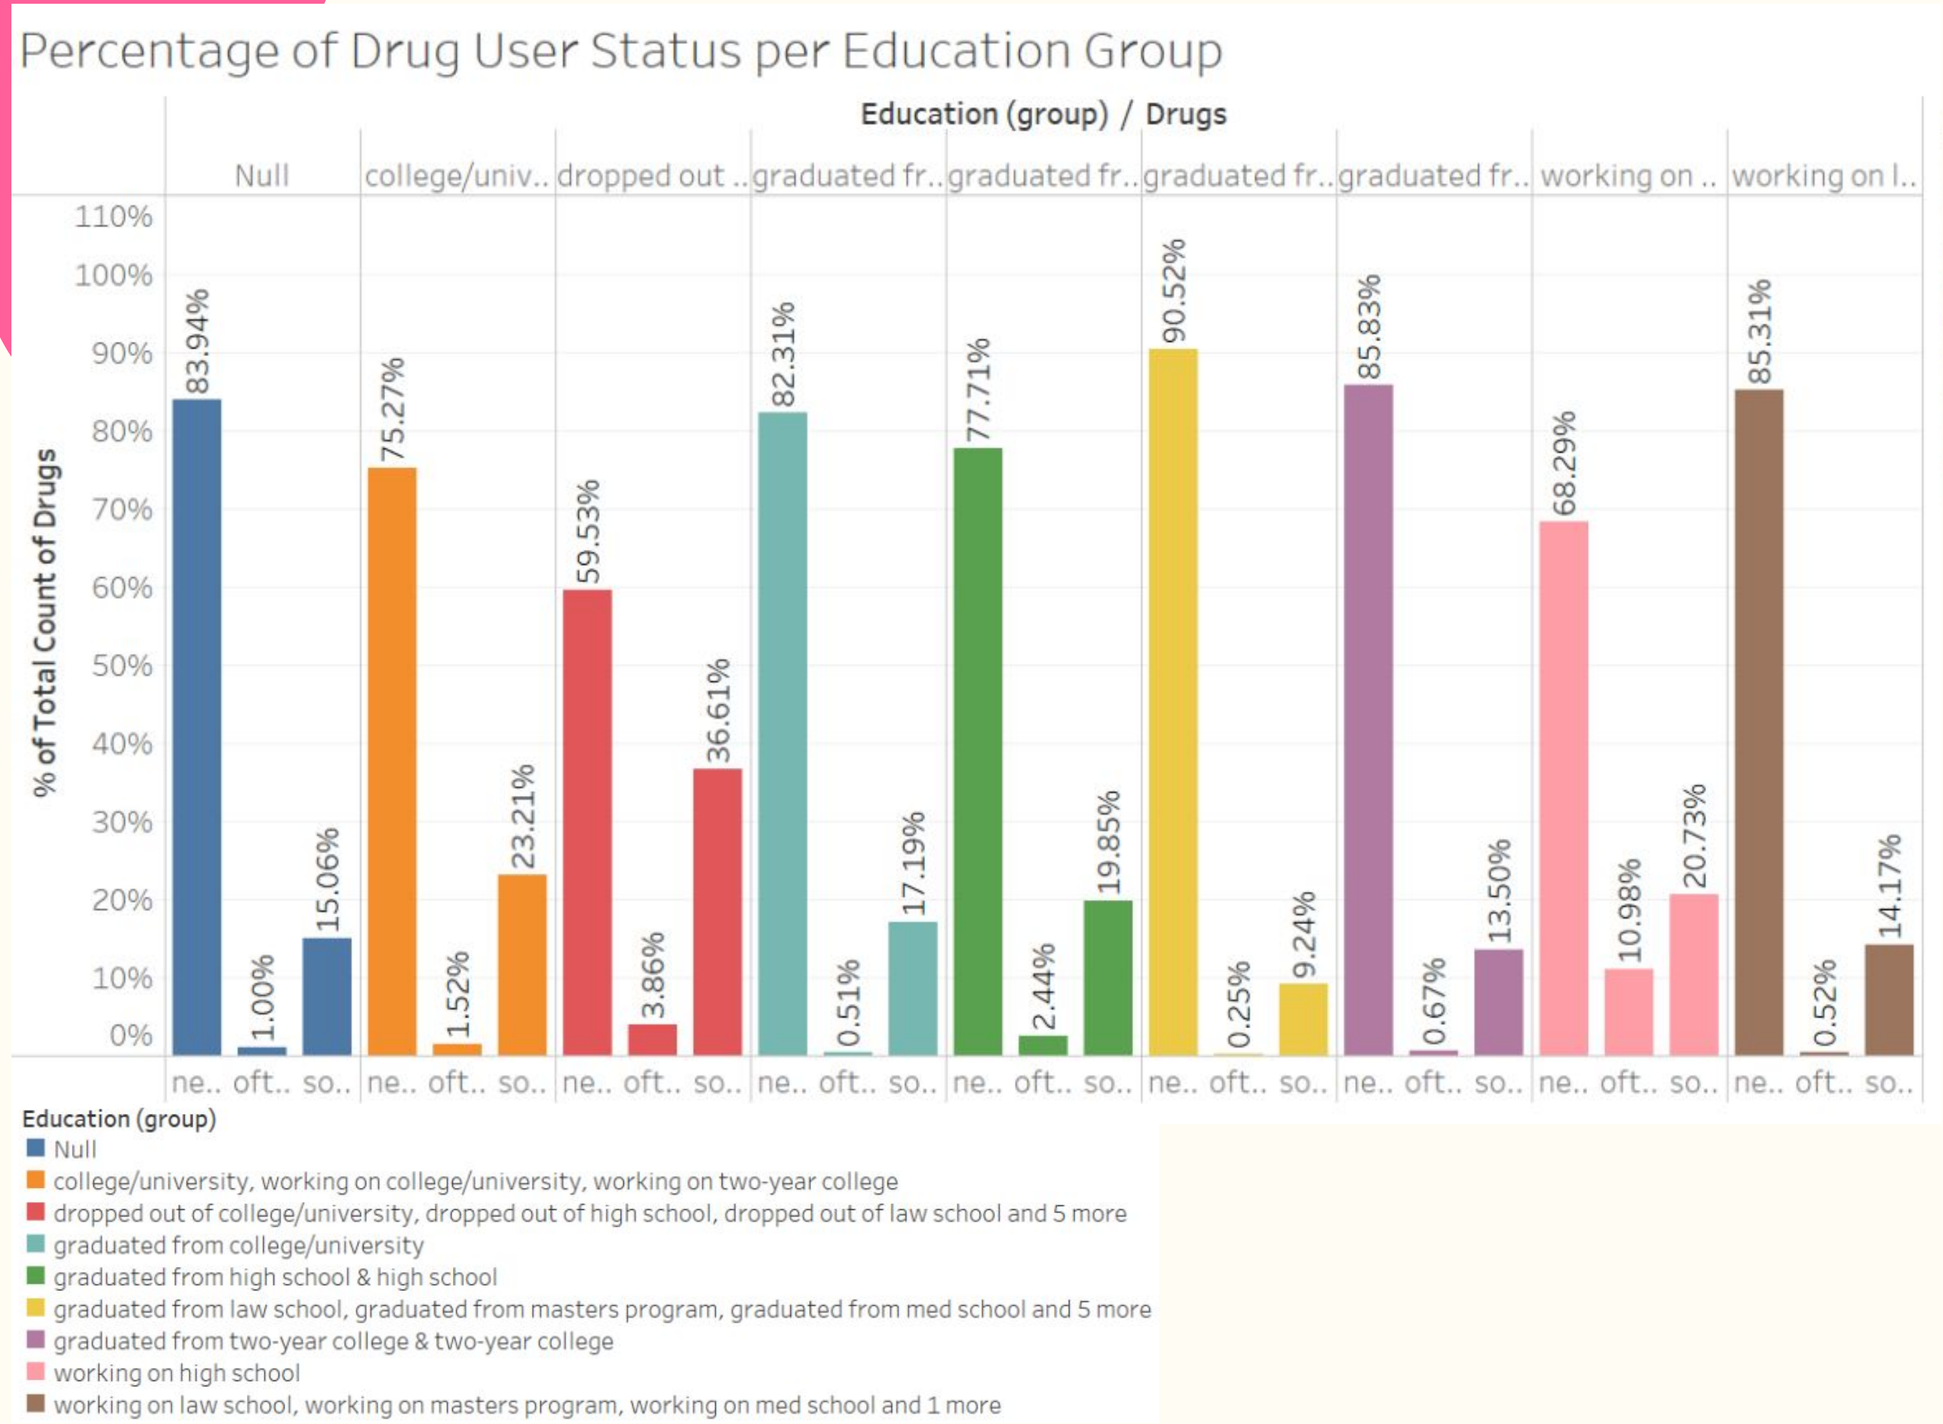


- Those working in banking / finance / real estate have the highest percentage of single people of all occupations (97.84%)
- Those that are unemployed have the highest percentage of users that are “seeing someone” (6.59%)



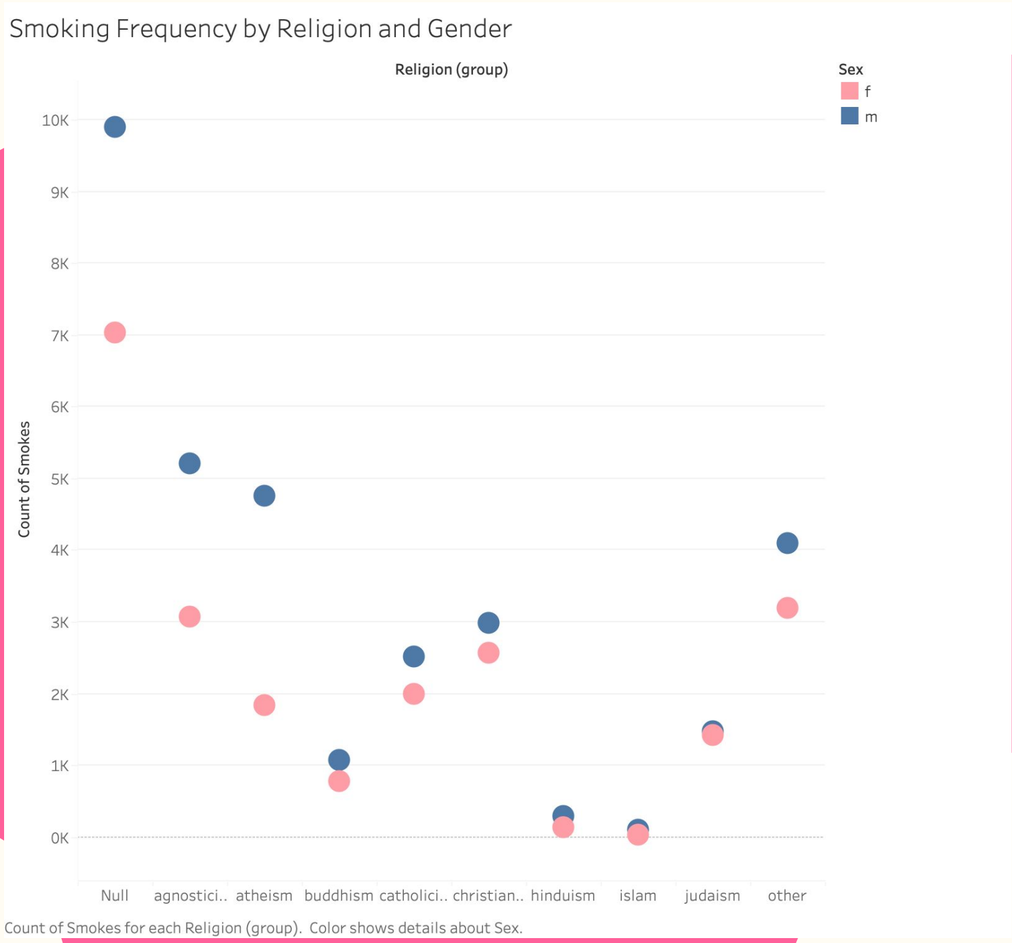
- After having kids, the percentages of people who drink rarely or not all increase, while those of people who drink socially or often decreases

- The percentage of people who drink often without kids is nearly double that of those who who have kids



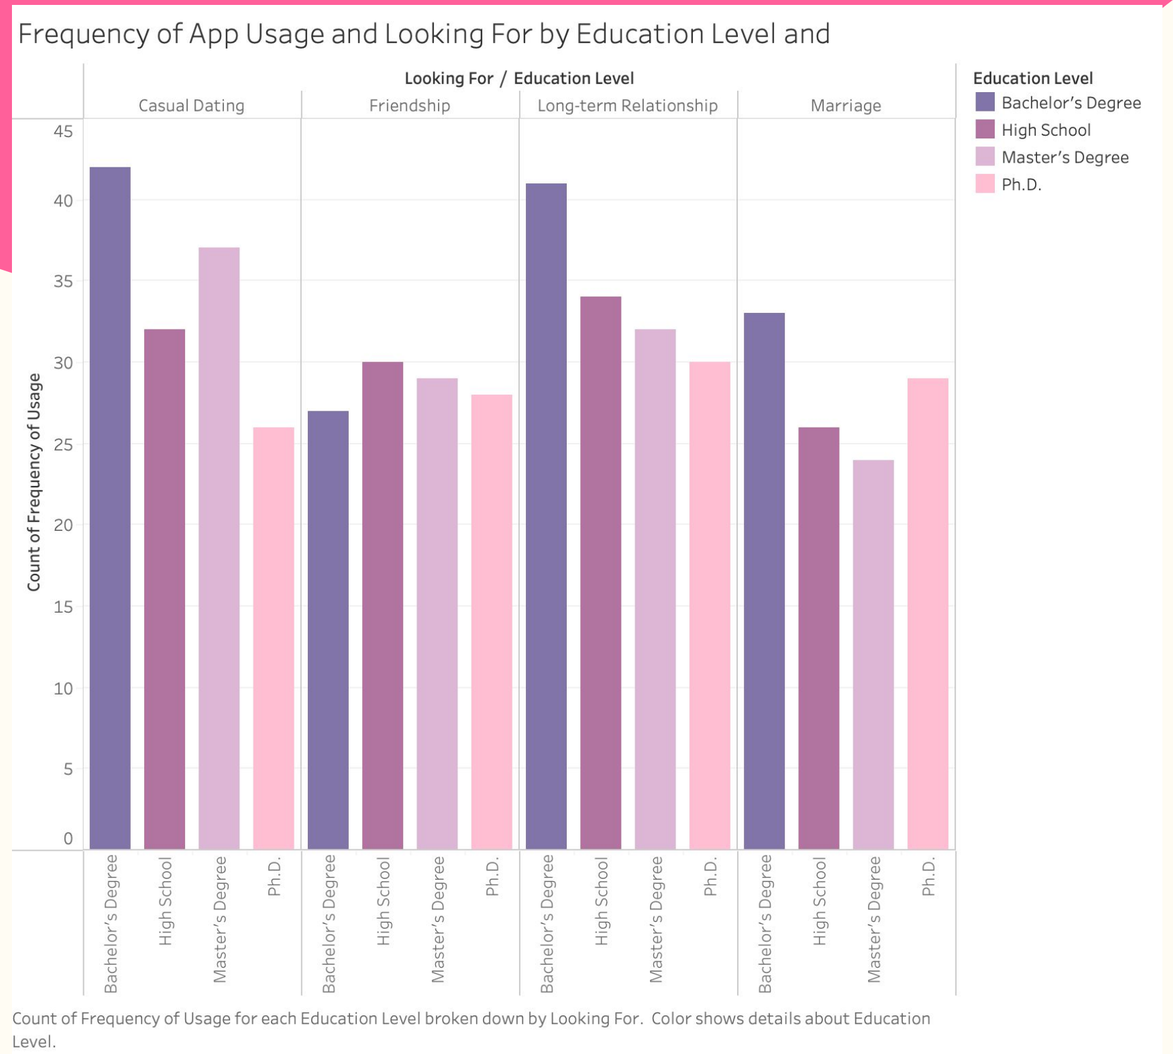
Those that dropped out of school appear to use drugs “sometimes”, possibly socially.

Those still in high school appear to have the highest percentage of individuals that use drugs “often.”

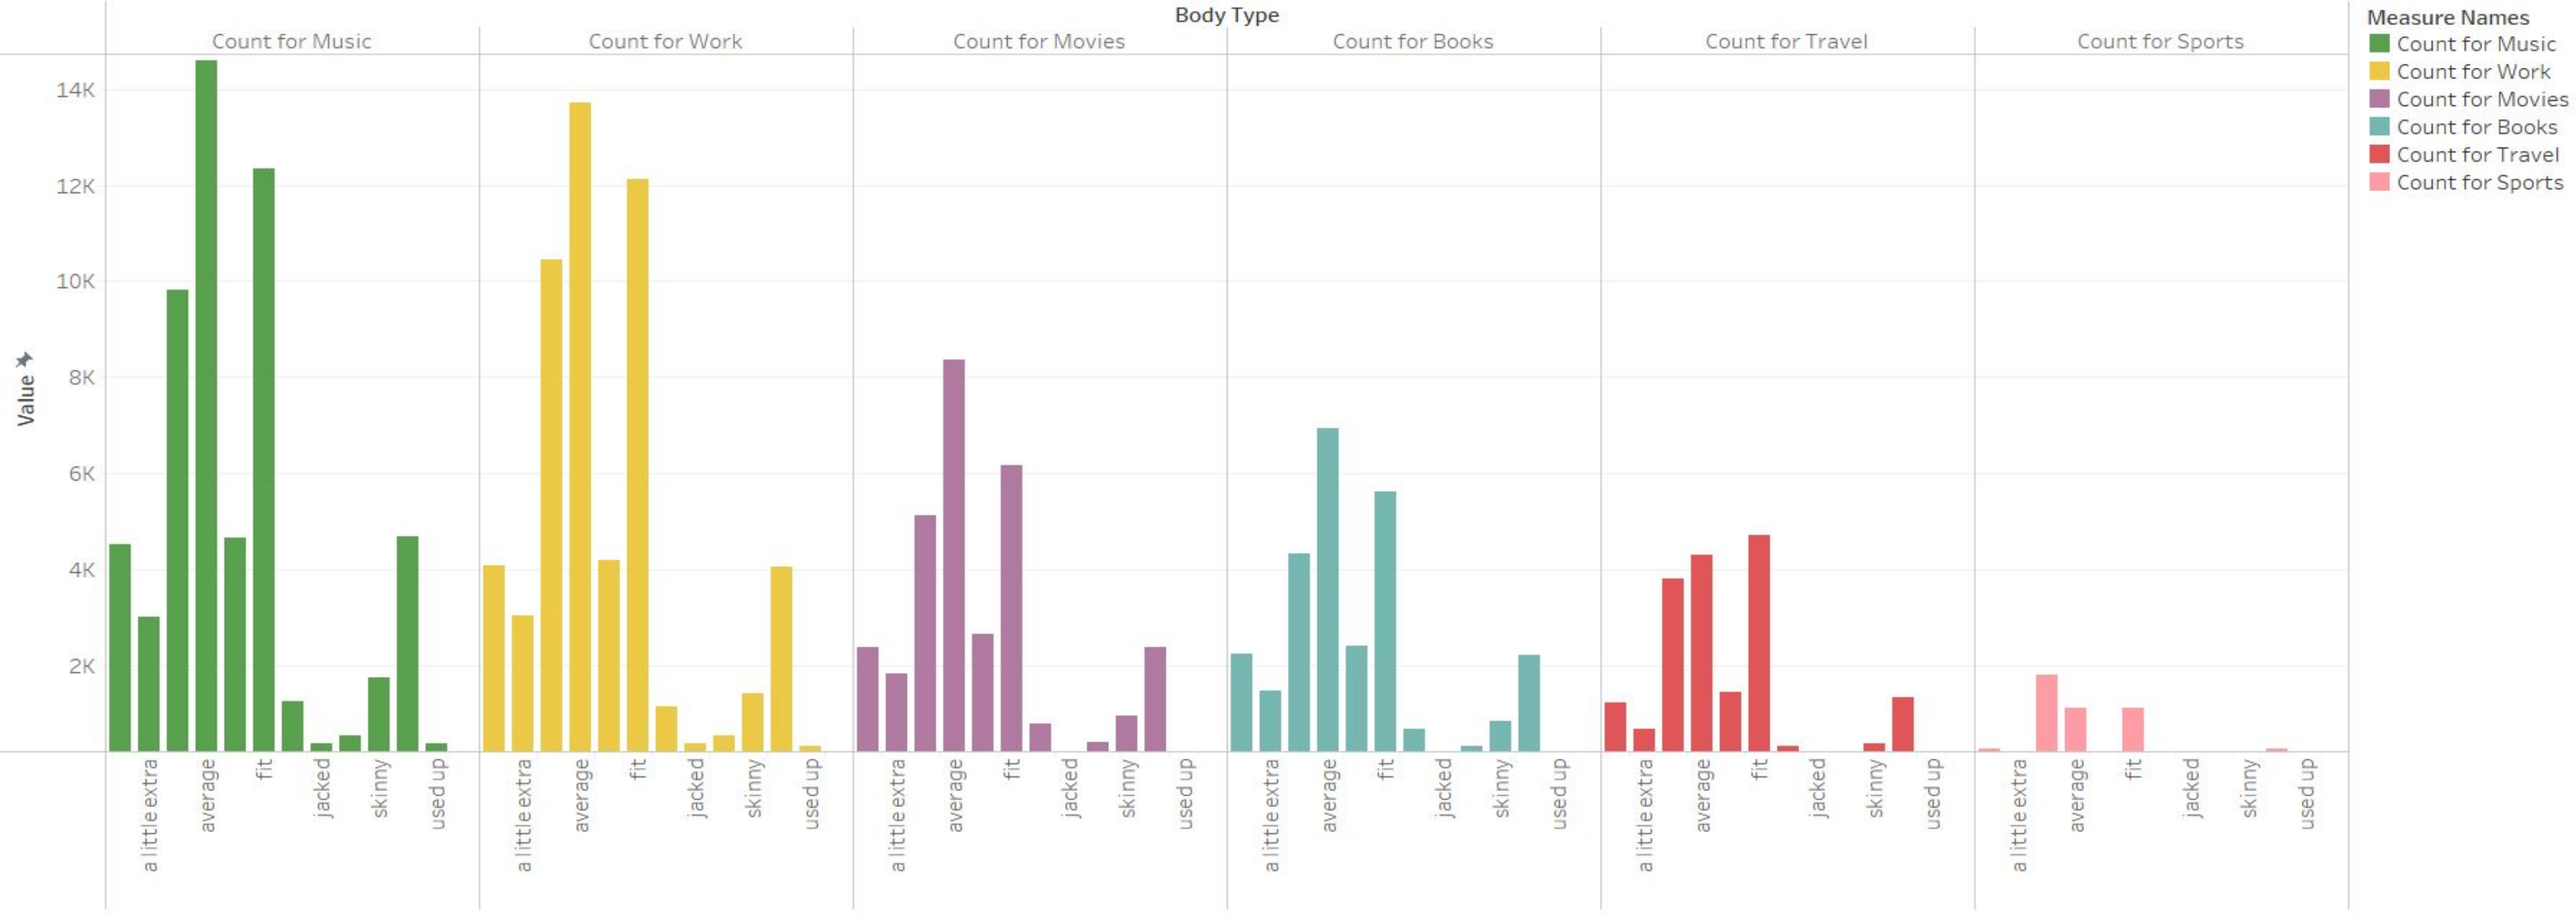


Men smoke more than women, and there is some variation by religion

Generally, people with a Bachelors use the app more, especially for casual dating and long term relationships. And in general, most people use the app to look for either causal or long term relationships. The groups looking for marriage are mostly PhD and Bachelor students.

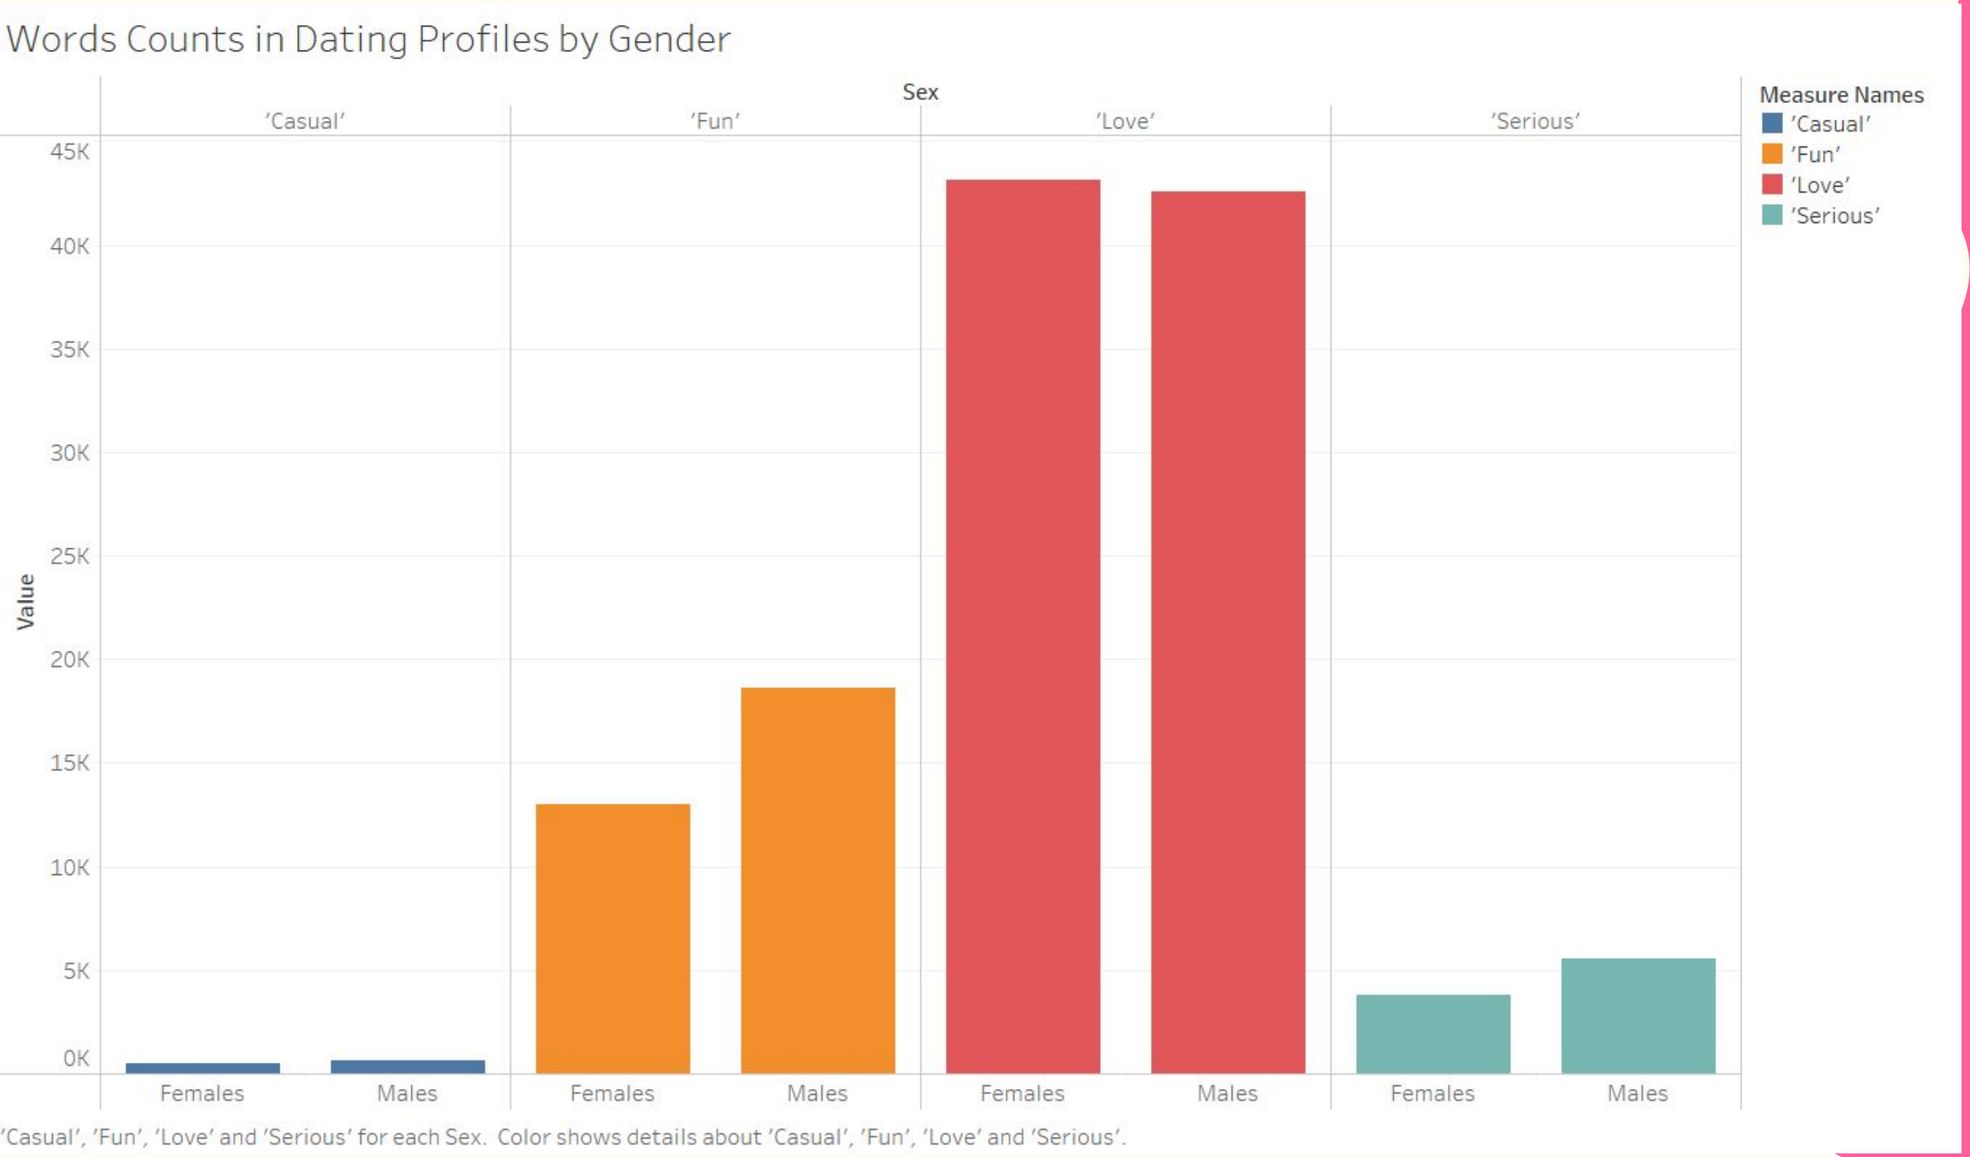


Interest Word Count by Body Type



Count for Music, Count for Work, Count for Movies, Count for Books, Count for Travel and Count for Sports for each Body Type. Color shows details about Count for Music, Count for Work, Count for Movies, Count for Books, Count for Travel and Count for Sports.

- **People with "fit" and "average" body types mention the most interests overall**, suggesting they provide more descriptive profiles.
- **Music and Work are the most frequently mentioned interests across all body types,** indicates that people commonly highlight creativity (Music) or career focus (Work) in their dating profiles, regardless of body type.



- **'Love' dominates** in dating profiles, with both males and females using it the most, surpassing 40K mentions.
- **Thus, emphasis in long-term relationships and intimacy** are suggested in both genders
- The minimal use of *'Casual'* might reflect **a preference for more meaningful relationships over explicitly casual dating**.

"About Me" Word Cloud

- This cloud gives us a snapshot into how people describe themselves in their profiles.
- Words like "time," "know," and "good" suggest a lot of self-reflection and personal growth.
- Common interests like hiking, movies, and music highlight the activities people value in their free time.

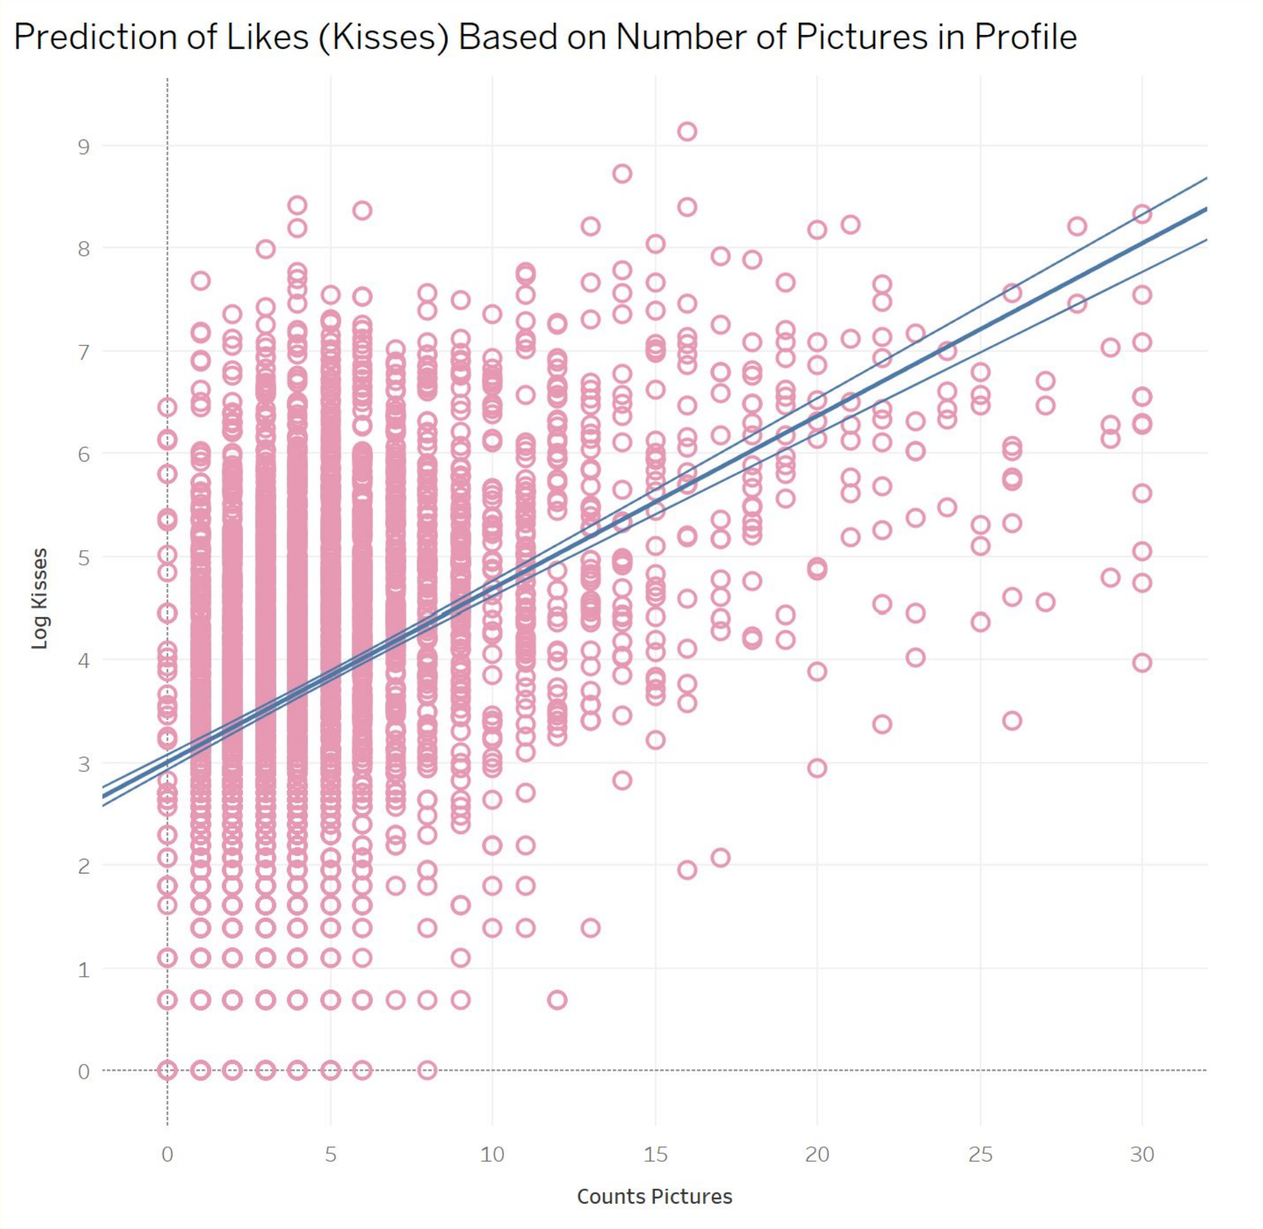
"Ideal Partner" Word Cloud

- This word cloud reflects the qualities people seek in a partner.
- Words like "fun," "humor," and "enjoy" stand out, showing that people are looking for someone they can connect with and have a good time with.
- "Relationship" and "love" emphasize that beyond fun, people are looking for something meaningful and long-lasting.
- The presence of "meet" and "message" shows that people are open to communication and new opportunities for connection.

Lovoo Dataset

Some columns worked with:

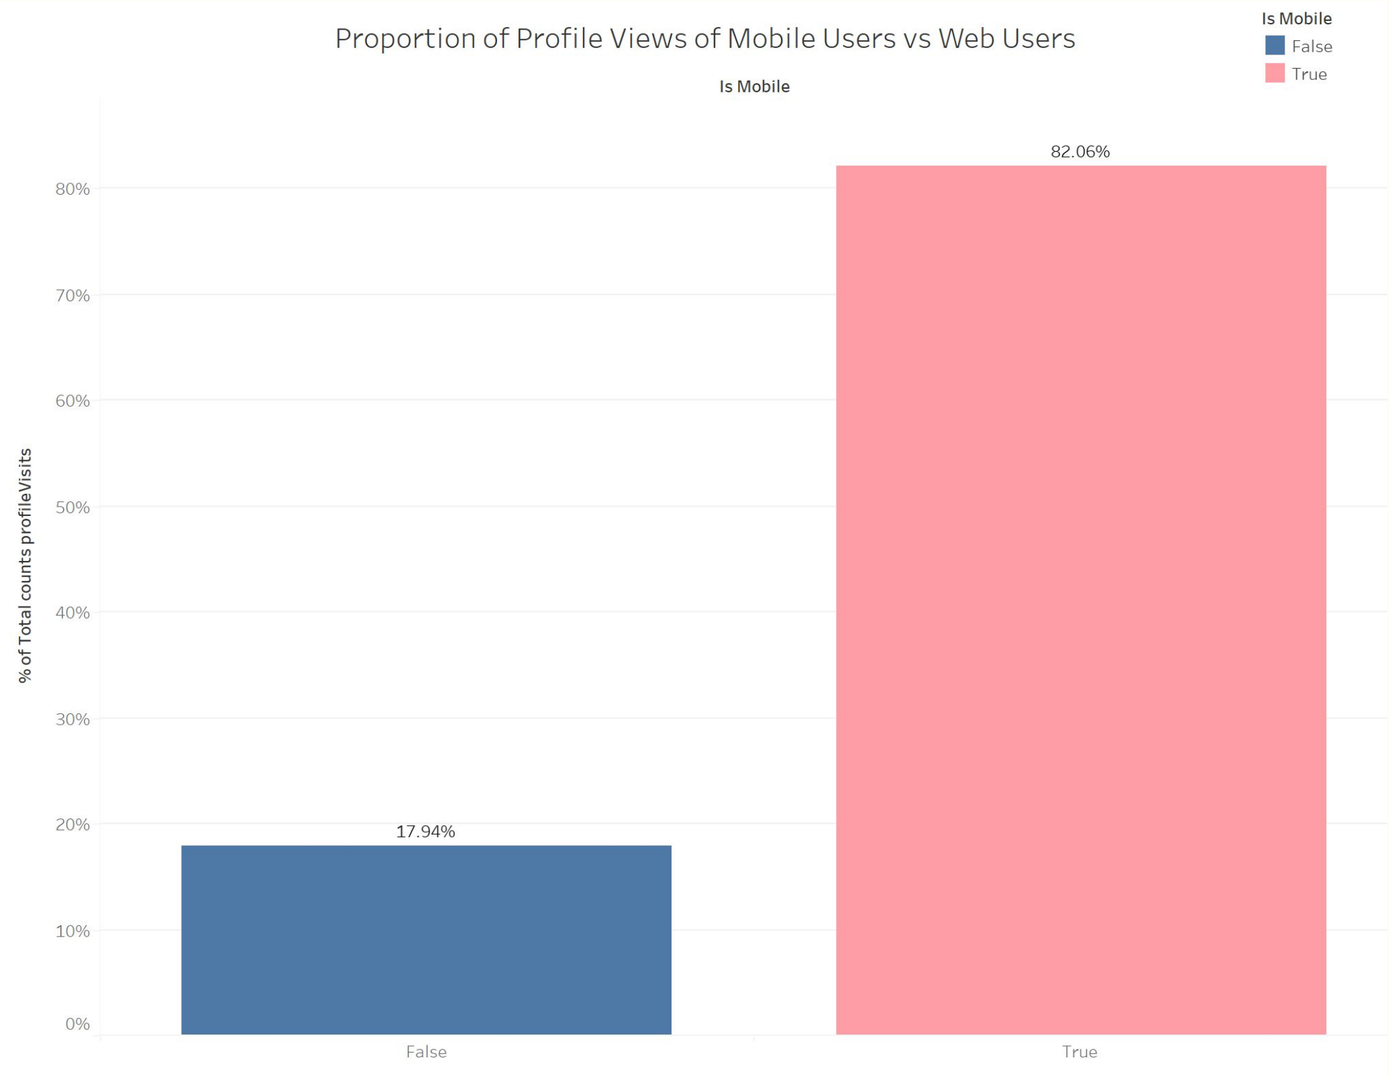
- count_pictures
- counts_kisses
- flirtinterest_date
- flirtinterest_friends
- counts_profileVisits
- country



Intercept = 3.003
Slope = 0.168
P-value < 0.0001
R-Squared = 0.192

There could be other variables that influence the number of likes

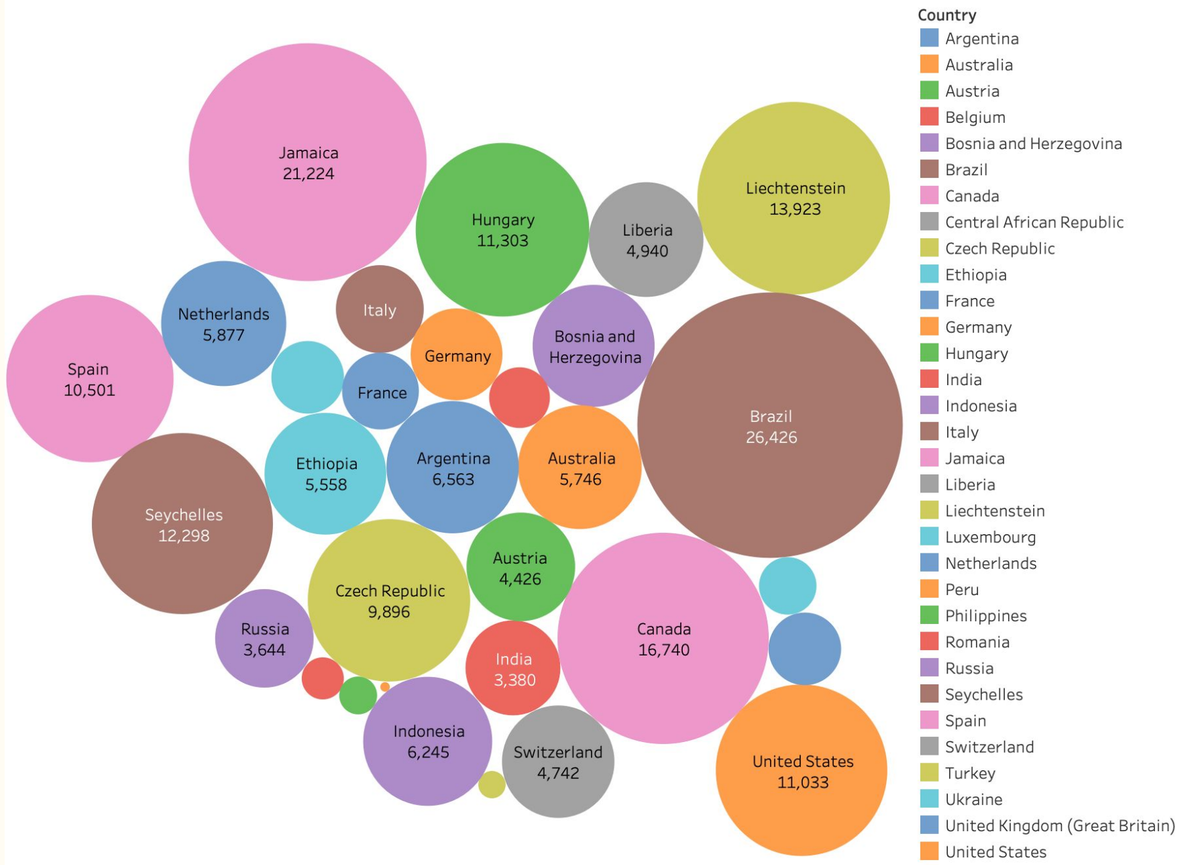
Intercept = -3.289
Slope = 0.9878
P-value < 0.0001
R-Squared = 0.845



A much larger proportion of users use the mobile app.

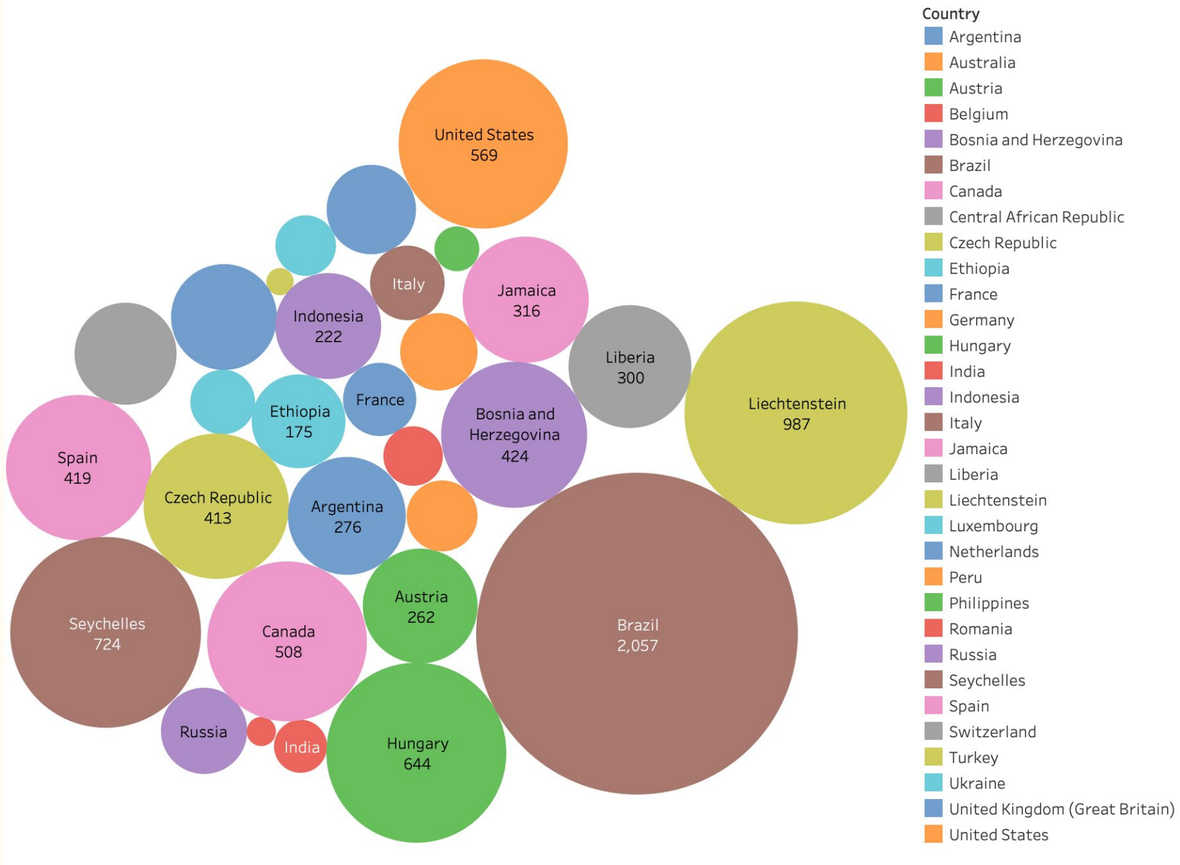
In all three groups of user goals (to date, to make friends, and to chat), the majority of profile views are received by people that have a status message in their profile.

Average Profile Views per Country



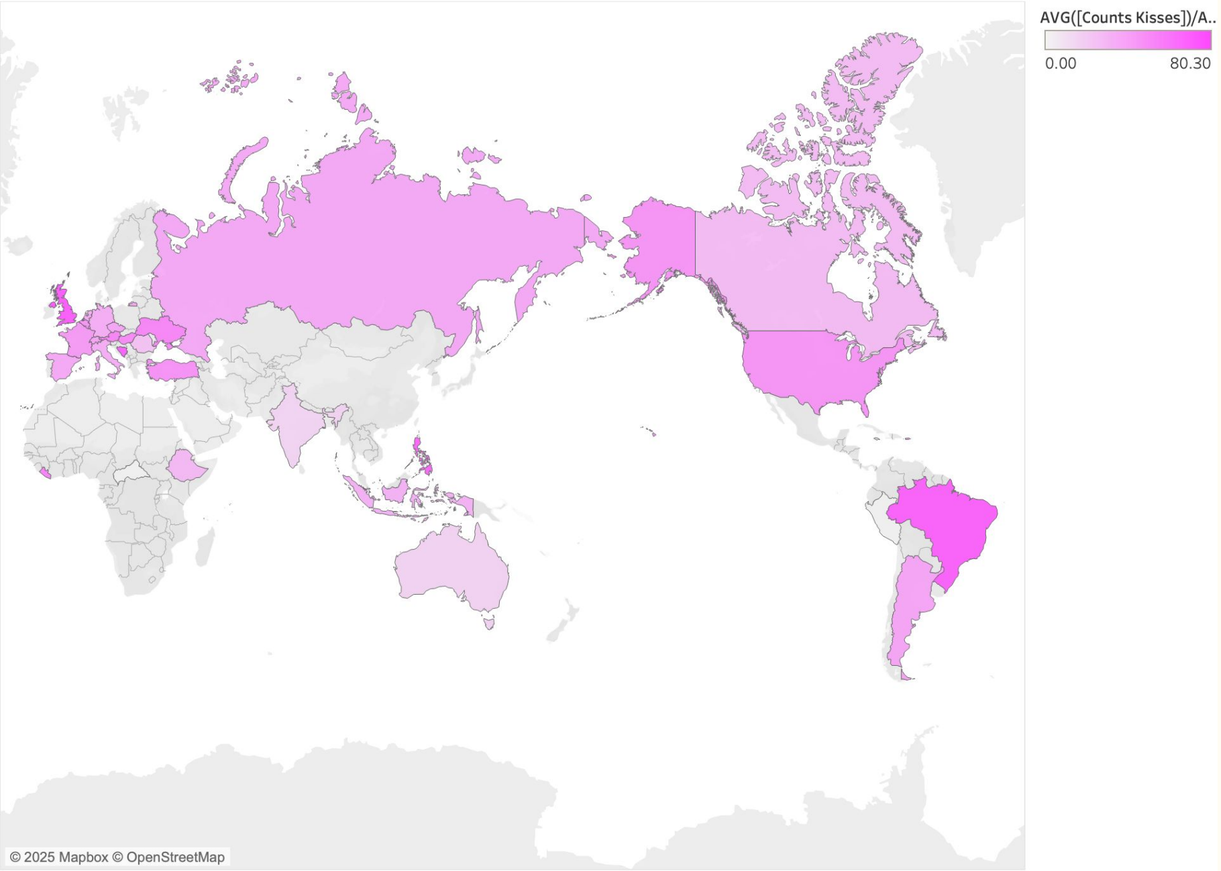
Country and average of counts profileVisits. Color shows details about Country. Size shows average of counts profileVisits. The marks are labeled by Country and average of counts profileVisits. The view is filtered on Country, which keeps 32 of 32 members.

Average Likes per Country



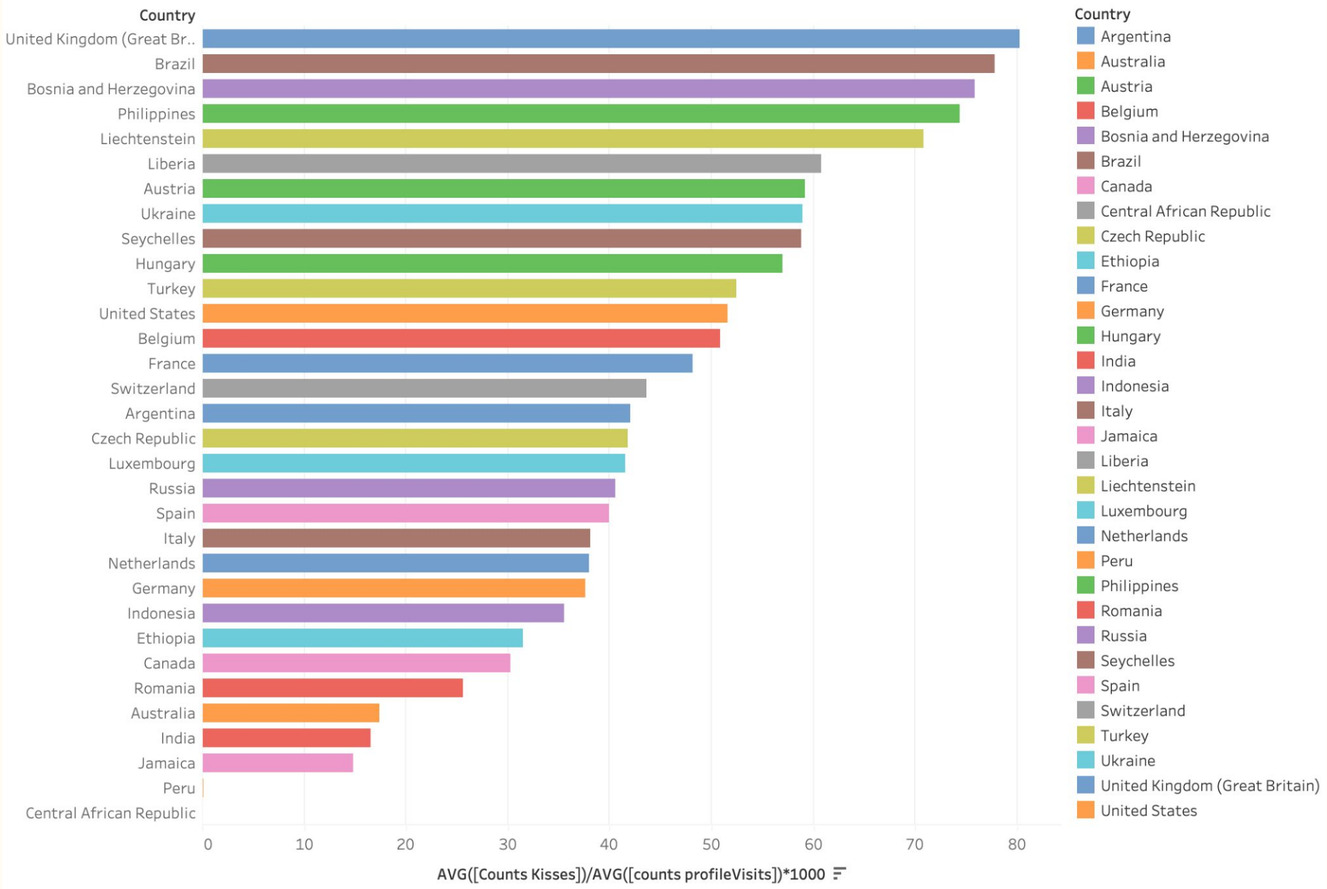
Country and average of Counts Kisses. Color shows details about Country. Size shows average of Counts Kisses. The marks are labeled by Country and average of Counts Kisses. The view is filtered on Country, which keeps 32 of 32 members.

Likes by Views per Country



Map based on Longitude (generated) and Latitude (generated). Color shows AVG([Counts Kisses])/AVG([counts profileVisits])*1000. Details are shown for Country.

Likes by Views per Country



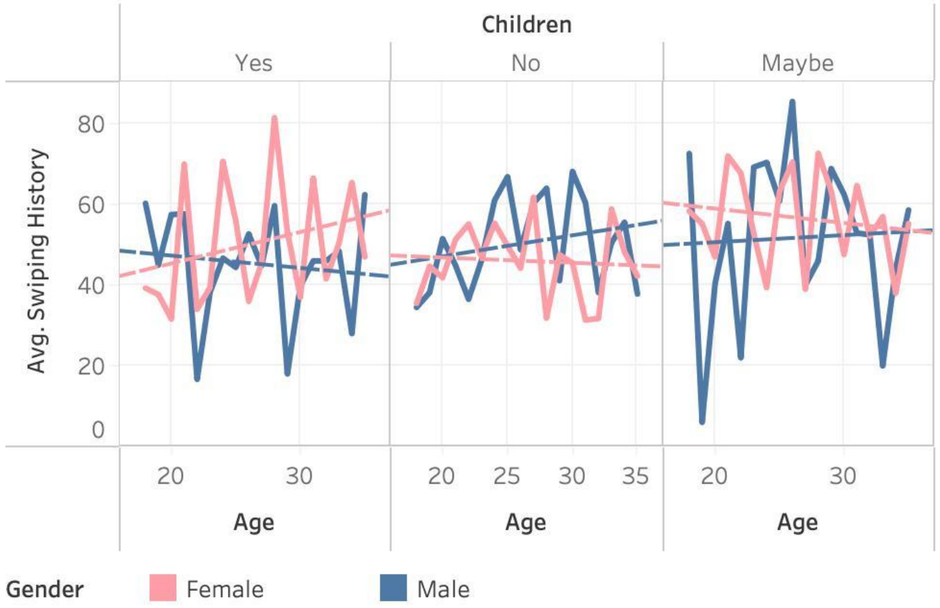
AVG([Counts Kisses])/AVG([counts profileVisits])*1000 for each Country. Color shows details about Country.

Kaggle Dataset

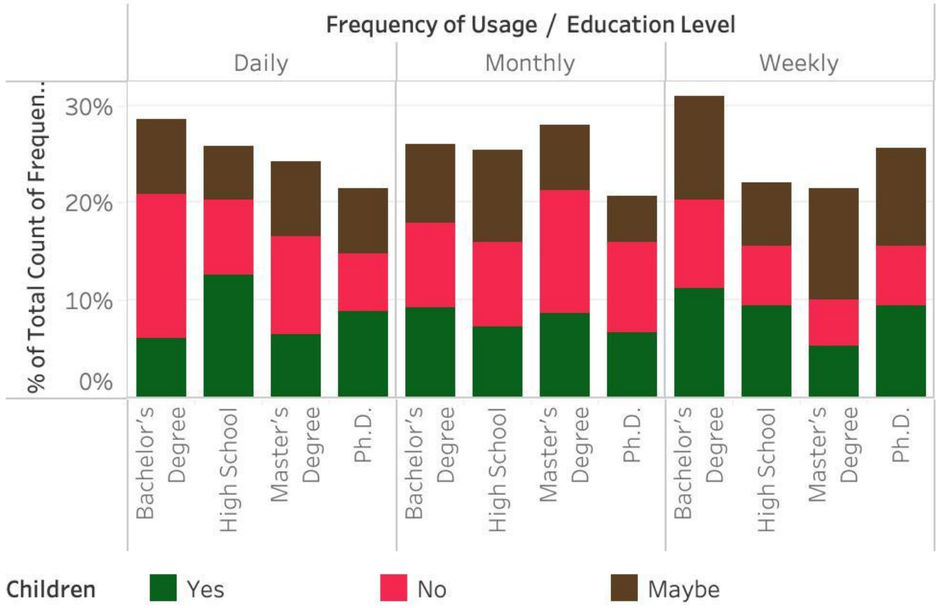
Some columns worked with:

- swiping history
- looking for
- occupation

Avg Swiping History vs Age and Wanting Children



Education Level vs Usage Frequency & Children



Occupation Percentage Based on Looking For
